2022-2026-CSE-B

Aim:

Write a C program to create dynamic memory allocation using malloc()

Source Code:

```
malloc.c
```

```
#include <stdio.h>
#include <stdlib.h>
int main() {
    int *p,i,sum=0,n;
    float avg;
    printf("Enter the number of integers: ");
    scanf("%d",&n);
    p=(int *)malloc(n*sizeof(int));
    if(p==NULL)
    printf("\n Unable to allocate memory.\n");
   exit(0);
   printf("Enter %d integers:\n",n);
   for(i=0;i<n;i++)
      scanf("%d",p+i);
      sum+=*(p+i);
   printf("The sum of the integers is %d\n",sum);
   avg=(float)sum/n;
   printf("The average of the integers is %.2f\n",avg);
   free(p);
}
```

Execution Results - All test cases have succeeded!

```
Test Case - 1
User Output
Enter the number of integers: 3
Enter 3 integers: 1 5 3
The sum of the integers is 9
The average of the integers is 3.00
```

```
Test Case - 2

User Output

Enter the number of integers: 5

Enter 5 integers: 1 2 3 4 5

The sum of the integers is 15

The average of the integers is 3.00
```
